

1 In the Claims:

2 Claims 1-22 are canceled without prejudice.

3 Claims 23-28 remain in the application and are listed as follows:

4

5

6 **1.-22. (Canceled).**

7

8 **23. (Original)** A decoder application comprising a wrapper for a first
9 decoder that is associated with an encoder that was used to compress original
10 source data, the wrapper being configured to receive compressed source data
11 from a rendering application; provide the compressed source data to the first
12 decoder so that the compressed source data can be uncompressed; receive back
13 modified source data that has been modified in some way so that the modified
14 source data is different from the original source data; and provide the modified
15 source data to the rendering application for rendering.

16

17 **24. (Original)** The decoder application of claim 23 further comprising a
18 modification module associated with the wrapper for receiving uncompressed
19 source data, modifying the source data, and providing the modified source data
20 back to the wrapper.

21

22 **25. (Original)** The decoder application of claim 23 further comprising a
23 modification module comprising part of the wrapper and configured to modify
24 the source data.

1 26. (Original) The decoder application of claim 23, wherein the original
2 source data comprises video data.

3
4 27. (Original) The decoder application of claim 23, wherein the original
5 source data comprises audio data.

6
7 28. (Original) The decoder application of claim 23, wherein the original
8 source data comprises both audio data and video data.
